WASHINGTON, D.C. 20230

BUREAU OF  
ECONOMIC ANALYSIS  
**Economics and  
Statistics  
Administration**

FOR WIRE TRANSMISSION: 10:00 a.m. EDT, Friday, June 28, 2002

**Investment Position:**

BEA 02-21

Elena L. Nguyen (202) 606-9555

**Direct Investment Detail at Historical Cost:**

Foreign Direct Investment in the United States:

Greg Fouch (202) 606-9831

Maria Borga (202) 606-9853

U.S. Direct Investment Abroad:

Mark W. New (202) 606-9875

Dan Yorgason (202) 606-9804

**U.S. Net International Investment Position at Yearend, 2001**

At yearend 2001, the value of foreign investment in the United States exceeded the value of U.S. investment abroad by \$1,948.1 billion with direct investment valued at current cost (Table 1). At yearend 2000, foreign investments in the United States exceeded U.S. investments abroad by \$1,350.8 billion (revised).

The previously published net international investment position for yearend 2000 was - \$1,842.7 billion with direct investment at current cost. The revision reflects the incorporation of the once-every-5-year Benchmark Survey of Foreign Holdings of U.S. Portfolio Assets conducted by the U.S. Treasury Department.

---

NOTE: This news release is available on BEA's Web site at <[www.bea.gov/bea/rels.htm](http://www.bea.gov/bea/rels.htm)>.

The \$597.3 billion increase in the negative net investment position from yearend 2000 to yearend 2001 was mainly due to large foreign purchases of U.S. stocks and bonds, exchange rate appreciation of the U.S. dollar (which reduced the value of U.S. holdings denominated in foreign currencies), and stock market price declines abroad (which lowered the value of U.S.-owned assets abroad) that exceeded declines in stock market prices in the United States (which lowered the value of foreign-owned assets in the United States).

With direct investment valued at the current stock market value of owners' equity, the negative net investment position was \$2,309.1 billion at yearend 2001, compared with \$1,583.2 (revised) at yearend 2000. The \$726.0 billion increase on this basis was due to the same factors as above -- i.e., large net foreign purchases of U.S. stocks and bonds, appreciation of the dollar, and larger declines in stock market prices abroad than in the United States. Other highlights include:

- ? Foreign acquisitions of assets in the United States in 2001 slowed to \$752.8 billion from a record \$1,016.0 billion in 2000. Foreign direct investment in the United States slowed substantially as a result of a large drop in foreign acquisitions of U.S. companies. Net foreign purchases of U.S. securities other than U.S. Treasury securities also slowed, but included record net purchases of U.S. bonds. Inflows reported by U.S. banks remained strong.
  - ? U.S. acquisitions of assets abroad in 2001 slowed to \$371.0 billion from a record \$606.5 billion in 2000. U.S. nonbanks' claims on foreigners, mostly deposits overseas, slowed substantially. U.S. direct investment abroad slowed as U.S. acquisitions of foreign companies fell. U.S. banks' claims on foreigners were off from last year's record but remained strong. U.S. investors shifted to net sellers of foreign bonds but continued as net purchasers of foreign stocks.
  - ? Price depreciation of U.S. stocks reduced the value of foreign holdings of U.S. stocks and substantially reduced the value of owners' equity of foreign direct investment in the United States on a market value basis. Price depreciation of foreign stocks also diminished the value of U.S. holdings of foreign stocks and substantially reduced the value of owners' equity of U.S. direct investment abroad on a market value basis.
  - ? Exchange rate depreciation, principally on U.S.-held foreign stocks and on U.S. direct investment abroad, reflected depreciation of most foreign currencies against the U.S. dollar from yearend 2000 to yearend 2001.
- 

#### Valuation Methods for Direct Investment

The current-cost method values the U.S. and foreign parents' share of their affiliates' investment in plant and equipment using the current cost of capital equipment, in land using general price indexes, and in inventories using estimates of their replacement cost.

The market-value method values the owners' equity component of the direct investment position using indexes of stock market prices.

The historical-cost method values all assets and liabilities at their book value. This method is only used to present country and industry detail.

---

U.S.-owned assets abroad increased \$4.2 billion to \$6,196.1 billion with U.S. direct investment valued at current cost, and they decreased \$487.9 billion to \$6,862.9 billion with U.S. direct investment valued at market value.

Claims on foreigners reported by U.S. banks increased \$164.7 billion to \$1,416.8 billion, reflecting continued strong lending to foreigners as borrowers shifted to bank credit amid deteriorating conditions in the securities markets. Banks' domestic customers' claims decreased as U.S. investors sharply reduced their holdings of foreign commercial paper.

U.S. holdings of foreign securities decreased \$278.9 billion to \$2,110.5 billion, as a result of large negative valuation adjustments from price depreciation of foreign stocks and from exchange rate depreciation of most foreign currencies against the U.S. dollar. These negative valuation adjustments more than offset large U.S. net purchases of foreign stocks. U.S. holdings of foreign bonds declined as a result of U.S. net sales and exchange rate depreciation that were only partly offset by bond price appreciation.

U.S. direct investment abroad at current cost increased \$107.8 billion to \$1,623.1 billion; at market value, it decreased \$384.3 billion to \$2,289.9 billion. In 2001, net financial outflows declined to \$127.8 billion, the lowest level since 1997. By account: Net equity capital outflows and reinvested earnings declined; net intercompany debt shifted to a small inflow. At current cost, financial outflows more than accounted for the increase in the position. At market value, financial outflows were more than offset by large declines in U.S. owners' equity, as foreign stock prices fell sharply in 2001, and by depreciation of foreign currency-denominated assets, as the value of the U.S. dollar appreciated against most foreign currencies.

Claims on unaffiliated foreigners reported by U.S. nonbanking concerns increased \$8.5 billion to \$830.1 billion. U.S. deposits in Western Europe and the Caribbean banking centers increased, but by much less than in the previous year.

U.S. official reserve assets increased \$1.6 billion to \$130.0 billion; an increase in the U.S. reserve position at the International Monetary Fund and a small increase in the market value of the U.S. gold stock were partly offset by a decline in the value of foreign currency-denominated assets.

Foreign-owned assets in the United States increased \$601.5 billion to \$8,144.3 billion with foreign direct investment valued at current cost, and they increased \$238.0 billion to \$9,172.1 billion with foreign direct investment valued at market value.

U.S. liabilities to private foreigners and international financial institutions reported by U.S. banks increased \$144.8 billion to \$1,298.2 billion, largely as a result of U.S. banks' borrowing from their own foreign offices abroad to fund their liquidity needs and lending abroad.

Foreign holdings of U.S. securities other than U.S. Treasury securities, excluding official holdings, increased \$233.0 billion to \$2,856.7 billion. Holdings of U.S. bonds increased, primarily as a result of record net foreign purchases of outstanding U.S. corporate and agency bonds, spurred by high yields on these issues relative to U.S. Treasury bonds and most other industrial countries' bonds, and by record levels of highly-rated new issues overseas. Holdings of U.S. stocks decreased, as strong foreign net purchases were more than offset by sizable price depreciation.

Holdings of U.S. Treasury securities by private foreigners and international financial institutions decreased \$12.2 billion to \$388.8 billion. Net foreign sales slowed in 2001, partly because Treasury securities became more attractive to foreigners after disruptions in the world financial markets caused by the September 11 terrorist attacks. Partly offsetting was price appreciation, which reflected the rise in U.S. bond prices through most of the year, as U.S. long-term interest rates fell.

Foreign direct investment in the United States valued at current cost increased \$124.2 billion to \$1,498.9 billion; at market value, it decreased \$239.3 billion to \$2,526.7 billion. In 2001, net financial inflows decreased sharply to \$130.8 billion, the lowest since 1997. By account: Net equity capital inflows slowed substantially, intercompany debt inflows fell, and reinvested earnings became negative as earnings deteriorated. At current cost, net financial inflows more than accounted for the increase in the position. At market value, net financial inflows were more than offset by substantial price depreciation in owners' equity resulting from the decline in U.S. stock prices.

Liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns increased \$75.1 billion to \$804.4 billion, reflecting U.S. corporate borrowing from foreign banks and from U.S. offshore finance affiliates in Western Europe and the Caribbean.

U.S. currency held by foreigners increased \$23.8 billion to \$275.6 billion, reflecting an increase in U.S. shipments abroad as a result of economic problems and fears of devaluation in some areas of the world.

Foreign official assets in the United States increased \$12.8 billion to \$1,021.7 billion. Net purchases of U.S. securities were nearly offset by large net withdrawals at U.S. banks.

Detailed estimates of the U.S. direct investment position abroad and of the foreign direct investment position in the United States are presented on a historical-cost basis in tables 2 and 3. These detailed estimates by country and by industry are not available on either a current cost or market value basis; they are only available on a historical-cost basis. At the level of all countries combined, the estimates of the direct investment positions at historical cost are substantially less than the estimates either at current cost or market value.

\* \* \*

### Revisions

Estimates of the U.S. net international investment position have been revised to incorporate updated source data. A major revision this year is the incorporation of results of the U.S. Treasury Department's Benchmark Survey of Foreign Holdings of U.S. Portfolio Assets as of March 2000. The Benchmark Survey is a security by security enumeration, provided by custodians and issuers of securities, of foreign holdings of U.S. portfolio assets with an original maturity of more than 1 year. The survey results indicate a significant overstatement in the previously published estimates of foreign holdings of long-term debt instruments, including foreign holdings of U.S. Treasury securities, foreign holdings of U.S. federally sponsored agency securities, and foreign holdings of U.S. corporate bonds. Consequently, foreign holdings of these instruments are revised down. Foreign holdings of U.S. stocks in most years are understated in the previously published estimates, those years are revised up. The results from the Benchmark Survey reduced the size of the negative U.S. net international investment position estimates in all years for 1995-2000. The largest revisions are in recent years. At yearend 2000, the year of the benchmark survey, the negative international investment position is revised from \$1,842.7 billion to \$1,350.8 billion with direct investment at current cost, and from \$2,187.4 billion to \$1,583.2 billion with direct investment at market value.

In addition to the above improvements, all estimates are revised as a result of newly available or revised quarterly and annual survey results and other data. Most revisions attributable to updated source data are for 1997-2000.

A more detailed discussion of the U.S. net international investment position in 2001 and the revised historical data will appear in the July issue of the Survey of Current Business. That issue will also contain an article about direct investment positions at historical cost and revised historical data. The articles and revised data will also be posted on BEA's Web site at <[www.bea.gov/bea/rels.htm](http://www.bea.gov/bea/rels.htm)>.
